1.0 INTRODUCTION

1.1 Purpose and Scope of Work

This report presents the results of a Phase I Environmental Site Assessment (ESA) of the property located at 2044 through 2070 Bryant Street in San Francisco, California (the site or subject property). The site location is shown on Plate 1. PES Environmental, Inc. (PES) performed the Phase I ESA on behalf of Nick Podell Company (Podell) to compile and evaluate available information on existing environmental issues to assess for Recognized Environmental Conditions[1] (RECs) associated with the subject property. PES understands that Podell is evaluating purchase of the property and that this ESA is a component of its due diligence. We further understand that Podell intends to demolish the current structure and redevelop the site with subsurface parking and an above-grade residential structure.

The ESA was performed pursuant to our proposal (Reference No. 390.023.01.P01) and the Professional Service Agreement between PES and Podell dated January 2, 2013 (Agreement), and in general accordance with ASTM International guidelines for Phase I Environmental Site Assessments (ASTM E 1527-05). These guidelines comply with the U.S. Environmental Protection Agency's All Appropriate Inquiries (AAI) rule adopted in November 2005. The following tasks were conducted during this ESA:

- Federal, State and local agency databases were reviewed to identify nearby sites which have reported the use, storage, or release of hazardous materials;
- Regulatory agency records regarding the site and adjacent properties were reviewed;
- Historical information such as aerial photographs, Sanborn Fire Insurance maps, and historical topographic maps of the site and surrounding area were obtained and reviewed to evaluate prior land uses;
- Previous environmental reports prepared for the subject property were reviewed;
- Individuals with knowledge of the site were interviewed;
- An inspection of the site and a reconnaissance of surrounding properties were performed to assess the potential for contamination of the site from on-site or off-site sources. The site inspection was conducted by an environmental professional with qualifying experience; and

[1] A REC is defined in the ASTM International guidelines for Phase I Environmental Site Assessments (ASTM E 1527-05) as *"the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. ... The term is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies."*

- This report was prepared to present the results of the ESA investigation.

1.2 Special Terms and Conditions

The ESA activities were conducted in general accordance with ASTM E1527-05. There are no special terms or conditions for this project.

1.3 Limitations and Exceptions

This Phase I ESA was performed in accordance with practices and procedures generally accepted in the consulting environmental engineering field at the time they were performed. The findings, opinions, conclusions, and recommendations expressed herein are applicable as of the date the services were provided. Our professional judgment to assess the potential for contamination is based on limited data; no warranty is given or implied.

The Phase I ESA was prepared at the request of Podell as part of its due diligence for acquisition of the property and may be relied on only by Podell and as provided for in the Agreement. No other party may rely on this report without the express written permission of Podell and PES.

Additionally, PES was not provided information regarding the purchase price of the subject property nor prices of comparable properties in the site vicinity. In accordance with ASTM E 1527-05, an evaluation of the purchase price relative to those of comparable properties should be conducted by the user of this Phase I ESA, as applicable.

2.0 SITE DESCRIPTION

2.1 Site Location and Description

The subject property is comprised of a two-story main building consisting of one legal parcel covering approximately 0.98 acres and identified by San Francisco County Assessor's Parcel Number (APN) 4022-021. As indicated on Plate 2, the site is bounded to the north by commercial properties, to the east by Bryant Street, to the south by residences, and to the west by Florida Street. The site consists of three tenant spaces with mailing addresses of 2044, 2050, and 2060-2070 Bryant Street, San Francisco, California. The tenant spaces also have respective delivery addresses of 631, 633, and 681 Florida Street.

2.2 Site and Vicinity Characteristics

The site is zoned as Urban Mixed Use (UMU) and is located in a mixed commercial and residential area of the City and County of San Francisco.

According to the United States Geological Survey (USGS) *San Francisco North, California* Quadrangle 7.5-minute series topographic map produced in 1999, the site vicinity is situated at an elevation of approximately 30 feet above mean sea level (MSL). The site slopes toward the west.

2.3 Local Geology and Hydrogeology

A 2011 subsurface investigation performed at a Pacific Gas & Electric (PG&E) property located at Shotwell and Treat Street (approximately two blocks to the west of the subject property [575 feet west]) identified approximately 20 feet of dense, poorly-graded sands with and without silts and clays beneath the property (Stantec, Inc. [Stantec], 2011). The sand was generally underlain by silty and clayey sands. Groundwater was encountered at depths ranging between 2 and 12 feet below ground surface (bgs). However, it is unknown whether subsurface conditions beneath the PG&E property (located at an elevation of approximately 20 feet MSL) are similar to those observed at the subject property.

Portions of the eastern edge of the San Francisco Peninsula have also been subject to historic uncontrolled filling operations using debris and other artificial fills derived from the 1906 earthquake (and earlier) demolition. These artificial fills, which are typically comprised of sand, gravel, and silt, can contain rubble and debris (e.g. bricks, concrete, and wood) as well as materials containing high concentrations of lead and other metals. Such areas are designated as an "Article 20 Affected Block" and are subject to assessment under the City's Maher Ordinance (Article 20). Article 20 blocks are located two blocks west and two blocks north of the subject property. It is not known whether demolition debris or other uncontrolled fill is present beneath the site.

Groundwater flow near the site has been observed to be to the northwest. The nearest surface water is San Francisco Bay, located approximately 1.25 miles east of the site. However, the site is located approximately 0.1 miles east-southeast and slightly upland of the historic location of Mission Creek and Laguna Dolores wetlands prior to infill and urban development.

2.4 Descriptions of Existing On-Site Structures and Improvements

2.4.1 Structures and Current Use

The main two-story building covers the entire property and consists of a formed concrete wall and steel frame construction and concrete slab-on-grade floor. The building is divided into three tenant spaces. Current site addresses, occupants, and a brief summary of current uses are as follows:

- **2044 Bryant Street – Production Specialties**: an industrial machine shop that produces machine parts;
- **2050 Bryant Street – Commercial and office uses**: includes office uses, a vacant night club and music production space, and a metal fabrications shop; and

- **2060-2070 Bryant Street – American Conservatory Theater (ACT):** ACT stores, constructs, and fabricates items for use in theater productions.

Photographs of the subject property and vicinity are presented on Plates 3 through 19.

2.4.2 Other Improvements

Electricity and natural gas are supplied by Pacific Gas & Electric. Water and sewer services are provided by the City of San Francisco.

2.5 Current Uses of Adjoining Properties

A reconnaissance of the surrounding area was conducted to assess whether neighboring sites represent a potential environmental condition that could affect the subject property. The current uses of the adjoining properties as observed during PES' reconnaissance are summarized below.

Properties to the North

The site is bounded to the north by commercial properties, including Creative Flooring Design at 2014 Bryant Street, and San Francisco Auto Repair Center at 611 Florida Street.

Properties to the East

The site is bounded to the east by Bryant Street. Across Bryant Street are commercial properties including Left Space at 2055 Bryant Street, which rents artists work spaces, and Fitzgerald Furniture Company, an upholstery business, at 2750 19th Street.

Properties to the South

The site is bounded to the south by residences that front on Bryant Street, 19th Street, and Florida Street.

Properties to the West

The site is bounded to the west by Florida Street. Across Florida Street is a multi-story residential complex with ground-floor commercial uses.

2.6 Past Uses of Property and Adjoining Properties

Historical site use information was obtained through a review of aerial photographs, Sanborn Fire Insurance Maps, historical topographic maps, regulatory agency records, and the results of previous environmental investigations (see list of references in Section 10.0).

2.6.1 Historical Sources

- **Aerial Photographs** – Aerial photographs were obtained from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. Photos for the following years were obtained and reviewed: 1946, 1956, 1968, 1974, 1982, 1993, 1998, 2005, 2009, and 2010. A summary of the aerial photograph review and copies of the photographs are presented in Appendix A;

- **Sanborn Fire Insurance Maps** – Historical Sanborn Fire Insurance Maps were obtained from EDR for the following years: 1889, 1900, 1914, 1950, 1975, 1987, 1989, 1991, and 1999. A summary of the Sanborn Map review and copies of these maps are included in Appendix B;

- **Topographic Maps** – A variety of topographic maps of the subject property and vicinity were compiled by EDR. The following maps were included in the compilation: USGS *San Francisco, California* 15-minute series topographic maps produced in 1895, 1915 and 1948; and USGS *San Francisco North, California* 7.5-minute series topographic map produced in 1947, 1950, 1956, 1993, 1995 and photorevised in 1968 and 1973. A summary of the topographic maps review and copies of these maps are included in Appendix C;

- **City Directories** – A search of city directories was performed by EDR for the years 1910 through 2012 in approximately 5-year intervals. A summary of the city directories review and copies of the directory listings are presented in Appendix D;

- **City and County of San Francisco Records** – San Francisco Building Department (SFBD), San Francisco Fire Department (SFFD), and San Francisco County Department of Environmental Health (SFDPH) records were requested by PES to evaluate historical uses at the subject property; and

- **Historical Environmental Documents** – No copies of previous environmental reports for the subject property were provided.

2.6.2 Historical Review Summary

Subject Property

The following provides a summary of historical use information for the subject property based on available historical resources listed in the previous sections and as described in historical documents.

The earliest record for the site is a 1889 Sanborn map, which shows the site as developed with multiple single-family residences and a few remaining vacant lots. By 1914 the northern portion of the site (the current 2044 Bryant Street locations) is shown occupied by an iron works. A 1946 aerial photo and 1950 Sanborn map show the subject property in its current

configuration. The 1950 and 1975 Sanborn maps lists machine shop and auto body use in 2044 Bryant Street, steel warehousing in 2050 Bryant Street, and machinery warehousing at 2070 Bryant Street.

Numerous addresses have been associated with the subject property, including 633, 651, 675, 677, 679, and 683 Florida Street. Historical city directories list the subject property as occupied by the Marshall Company Central Iron Works from 1920 through 1930; the Modern Vehicle Company and Northern California Machine Tools from 1935 through 1966. Later listings (1977-1985) show the site occupied by light fixture warehousing and retail. ACT is listed at 681 Florida Street beginning in 1982, and from 1990 through 1993 a silk screen production company occupied 2050 Bryant Street. Klein Industries (Production Specialties) is listed as the occupant of 2044 Bryant Street in city directories from 2000 to 2012.

Subject Property Vicinity

The subject property vicinity has gone through development at similar periods of time as the subject property. The earliest Sanborn maps (1889 and 1900) show the subject property vicinity as primarily vacant with some residential and with a warehouse and school across Bryant Street. After the 1906 earthquake, directory listings and insurance maps show expanded commercial and industrial development in the vicinity of the Site, including clothing factories, a wool manufacturing warehouse, a brewing company, an engine & foundry company, a box factory, a dye works company, auto repair, laundry facilities, a cabinet shop, and a school. By 1968 the warehouse building to the west of the subject property was demolished and replaced with a smaller single structure. The multi-story residential complex across Florida Street (west of the subject property) was constructed between 2007 and 2008.

2.6.3 Interviews

Mr. Ian Reynolds, production manager for Production Specialties, was interviewed by Mr. Christopher Baldassari of PES on March 29, 2013. Mr. Reynolds indicated that he has been associated with the subject property since approximately 2009. Mr. Reynolds stated that the 2044 Bryant Street space had been used for machine shop-related purposes since the 1950s. He said that Production Specialties manufactures parts for machinery such as compressors, and generally produced finished parts from castings delivered to the site; however no casting is conducted onsite. Mr. Reynolds stated that Production Specialties utilizes various water-based cutting fluids and coolants, generally contained in individual machinery reservoirs. He indicated that the reservoir fluids are not regularly maintained but that new fluids are added as they run low. He said that the facility operates under an approved hazardous materials business plan (HMBP) and is periodically inspected by SFDPH and SFFD for compliance, but was not aware of any other environmental permits. Mr. Reynolds stated that hazardous waste generation at the site is limited to waste oil and coolant, which is accumulated in 55-gallon drums and subsequently transported for offsite disposal approximately once a year by Evergreen Environmental. He stated that used rags are accumulated in a drum and removed on a bi-weekly schedule by an outside vendor (Aramat). Mr. Reynolds further stated

that chemical uses at the site includes uses of cutting fluids and coolants, and petroleum-based solvents including kerosene for cleaning metal parts. He indicated that cutting fluid is reused frequently and is stored in a 55-gallon drum. Mr. Reynolds also stated that he was unaware of current or historical underground tanks at the site, was not aware of any potential environmental concerns associated with the subject property. He noted that no heating or cooling system (e.g., HVAC) is utilized at the site. He was not aware of any asbestos-containing materials O&M plan.

Mr. Lloyd Klein, the current property owner, was interviewed by Mr. Baldassari on June 14, 2013 about the potential presence of USTs at the subject property. Mr. Klein stated that he was unaware of any USTs at the site, nor were the presence of any USTs disclosed to him prior to purchasing the property in 1982.

3.0 PREVIOUS ENVIRONMENTAL DOCUMENTS

No environmental reports were made available to PES for review as part of this ESA.

4.0 RECORDS REVIEW

4.1 Environmental Liens

Based on review of an environmental database search conducted by EDR, there are no Federal Superfund (National Priority List [NPL]) liens or State deed restrictions associated with the subject property.

4.2 Standard Environmental Record Sources

The discussion presented in this section is based on available information provided by government agencies and various databases. An EDR report dated March 22, 2013 contains listings of sites located within a 1-mile radius, which were selected in accordance with ASTM E-1527-05 standards. This information is obtained from computerized databases of Federal, State, and local records. The EDR database report is included on CD-ROM as Appendix E.

The following regulatory agency databases were searched and reported in the EDR report:

- U.S. Environmental Protection Agency (U.S. EPA) – Comprehensive Environmental Response Compensation, and Liability Information System (CERCLIS);
- U.S. EPA – CERCLA NPL;
- U.S. EPA – CERCLA Proposed NPL;

- U.S. EPA – Superfund (CERCLA) Consent Decrees (CONSENT);
- U.S. EPA – CERCLA Records of Decision (ROD);
- U.S. EPA – CERCLA NPL Deletions;
- U.S. EPA – CERCLA No Further Remedial Action Planned Site (CERC-NFRAP);
- U.S. EPA - Facility Index System (FINDS);
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA– Hazardous Materials Information Reporting System (HMIRS);
- U.S. EPA – Material Licensing Tracking System (MLTS);
- U.S. EPA – Mines Master Tracking Index File (MINES);
- U.S. EPA – Federal Superfund Liens (NPL Liens);
- U.S. EPA – PCB Activity Database System (PADS);
- U.S. EPA – RCRA Administrative Action Tracking System (RAATS);
- U.S. EPA – Section 7 Tracking Systems (SSTS);
- U.S. EPA – Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA)/Toxic Substance Control Act (TSCA) Tracking System (FTTS);
- U.S. EPA – Toxic Substances Control Act (TSCA);
- U.S. EPA – Resource Conservation and Recovery Information System (RCRAInfo), Treatment, Storage, or Disposal (TSD) facilities, and Small Quantity and Large Quantity Generators (SQG and LQG) of hazardous waste;
- U.S. EPA – Emergency Response Notification System (ERNS);
- U.S. EPA RCRA Corrective Action Report (CORRACTS);
- U.S. EPA Facility Index System (FINDS);
- U.S. EPA Toxic Chemical Release Inventory System (TRIS);
- California State Water Resources Control Board (SWRCB) – Leaking Underground Storage Tank Listing (LUST) sites including Indian Land;
- SWRCB UST;

- SWRCB – Voluntary Cleanup Sites (VCP); and
- SWRCB – Solid Waste Facilities (SWF/LF).

4.2.1 Subject Property Records

Database Listings

The EDR report did not identify any listings for the subject property.

Regulatory Agency Records

In addition to the records provided in the EDR report, PES also searched the following agency websites for environmental records related to the subject property:

- California State Water Resources Control Board's GeoTracker website located at http://geotracker.swrcb.ca.gov/; and
- DTSC's EnviroStor website located at http://www.envirostor.dtsc.ca.gov/public/default.asp.

The subject property was not listed on the referenced websites.

4.2.2 Surrounding Area

Several sites in the subject property vicinity are listed on hazardous materials release and/or storage databases. However, these properties are not expected to present significant environmental conditions to the subject property based on one or more of the following: (1) the listed property has received case closure by the appropriate regulatory agency; (2) the listed property is either cross gradient or down gradient of the subject property with respect to the inferred regional groundwater flow direction; (3) the listed property is a soils-only affected case; and (4) the listed property is located at too great a distance to represent a significant environmental condition with respect to the subject property.

5.0 SITE INSPECTION

5.1 Methods

An inspection of the subject property and site vicinity was conducted on March 29, 2013 by Christopher Baldassari of PES. With the exception of several living areas in 2050 Bryant Street, all areas were accessible and were inspected. Site photographs are presented on Plates 3 through 19.

5.2 General Site Setting

The subject property is comprised of a two-story warehouse building. The corrugated steel roof is supported by steel trusses, and the outer walls are made of formed reinforced concrete with concrete support pilasters. The eastern side of the building (fronting Bryant Street) and a portion of the northern side appear constructed of unreinforced brick and mortar. Mobile overhead hydraulic lifts comprised of steel beams riding on wall-mounted rails were observed in the 2050 and 2060-2070 Bryant Street spaces.

The building is divided into three occupied tenant spaces, which are generally comprised of open warehouse spaces with ancillary office spaces on the eastern sides of the building (Plate 2).

5.3 Interior Observations

2044 Bryant Street/631 Florida Street (Production Specialties): The space is currently used as an industrial machine shop. Rows of metal-working and -milling machinery were in operation during the inspection. The concrete floor surface was observed to have numerous cracks and widespread oily staining. Free fluids were observed on the floor adjacent to many of the machines (Plates 10 and 11). Observations of chemical use and storage included:

- Several 55-gallon drums of cutting fluids were present. The drums were horizontally on stands for use with dispensers (Plate 9, Photo 1); none of the observed drums were in secondary containment and staining and spills were observed on the concrete floor;

- Bench-scale chemicals consisting of various cutting fluids, lubricants, and metal cleaners (including cutting fluids identified as containing chlorinated hydrocarbons) were observed throughout the machinery workstations (Plate 10, Photo 1); these chemicals were observed stored in cabinets, workbenches, and on the floor throughout the site;

- Numerous unlabelled 5-gallon containers that had oily residues on the outside and appeared to have been used for waste storage were observed (Plate 11 Photo 2);

- Numerous unlabeled containers containing oily fluids were observed underneath machinery at the site;

- A 55-gallon drum was observed in use for on-site recycling cutting fluid. A hole cut in the side of the drum permitted pouring in used oil for later reuse;

- A 55-gallon drum of kerosene with a hand pump was observed in use (Plate 8, Photo 2); evidence of prior spillage was observed on the concrete floor surrounding the kerosene drum;

- A hazardous waste storage drum (with an accumulation start date of July 24, 2012) near the western side of the building (Plate 8, Photo 2). The drum was labeled as containing waste oil and coolant, and was stored on the concrete floor. No leaks from the drums were observed; and

- A possible UST fill port in the sidewalk was observed (Plate 19, Photo 2).

Metal shavings from the machining equipment were observed on the floor in widespread areas, and stored in several 55-gallon drums, reportedly for off-site recycling. A 2-gallon container of chromic acid and used fluorescent light tubes were observed in a storage room located in the northeastern portion of the tenant space. The second story was used for office purposes. *De minimis* quantities of cleaning supplies were observed adjacent to the first and second story bathrooms. Information on the possible UST fill port located in the sidewalk was unavailable at the time of inspection.

2050 Bryant Street: The tenant space was most recently used as a night club and performing arts center, and includes a bar area, art gallery space, and metal fabrication shop (Plates 12 through 14). Portions of the second story were used for office/residential purposes. Reportedly no hazardous wastes are generated or stored, and no environmental permits were available for review. Chemical use and storage observations included:

- Several small containers of chemicals were observed in the metal shop on a work bench and in a storage cage, and included petroleum-based naphtha and denatured alcohol (Plate 13, Photo 2); and

- Several medium-sized cylinders of compressed gas for welding, including oxygen and acetylene, were observed in a storage rack.

2060-2070 Bryant Street: The space was occupied by the ACT scene shop, which utilizes the premises for building, maintaining, and storing theater scenery props (Plates 15 through 19). Woodworking, metal working, and paint areas (including a spray booth) were observed. In the eastern portion of the space, both the first and second floors were being used for general office and storage purposes (Plate 19, Photo 1). With the exception of a metal working and storage area in the western portion of the space, a raised wooden floor was present over the concrete slab. Several small interior rooms were utilized for storage of woodworking (e.g., hardware, screws, nuts, and glues), paint, and light construction supplies. A large woodwork area was observed on the southern side of the space (Plate 15, Photo 1). To the western side (near Florida Street) a metal shop was observed (Plate 16, Photo 2); chemical use appeared limited to several small containers of petroleum-based solvents (e.g., WD-40). Several medium-sized cylinders of compressed gases (e.g., oxygen and acetylene) were observed in a storage rack.

A large prop-painting area was observed on the northern portion of the space (Plates 16 and 17). Several flammable cabinets were observed in use and contained many small containers of spray paint as well as chemicals including kerosene, acetone, denatured alcohol, varnishes, polyurethane coatings, mineral spirits, and methyl-ethyl-ketone (Plate 18, Photo 1). PES observed numerous one- and five-gallon containers of water-based paints in the prop-painting area.

5.4 Underground and Aboveground Storage Tanks

No evidence of existing USTs or ASTs was identified during the site inspection, with the exception of a possible UST fill port located in the sidewalk adjacent to Florida Street and outside the 631 Florida Street/2044 Bryant Street space.

5.5 Back-Up Generators

No back-up generators are present at the site.

5.6 Elevators

No elevators were identified on the site during the site inspection.

5.7 Hydraulic Trash Compactors

No trash compactors were observed on the site.

5.8 Indications of Polychlorinated Biphenyls (PCBs)

Pad-mounted transformers were not observed on the site. A pole mounted transformer was observed in front of 2060-2070 Bryant Street, and a transformer was observed on the opposite side of Florida Street across from the site. Several dry-cell transformers were observed inside 2044 Bryant Street.

5.9 Other Conditions

5.9.1 Asbestos

An assessment of asbestos-containing materials was not conducted as part of this Phase I ESA. Standards set by the Occupational Safety and Health Administration (OSHA) require building owners to presume that thermal system insulation (TSI) and surfacing ACM found in buildings constructed before 1981, and floor tile installed in buildings through 1981, are asbestos containing, unless demonstrated to be less than 1 percent asbestos through sampling. The rule does not permit an assumption to be made that a material does not contain asbestos in buildings constructed after 1980. However, since the late 1970s to early 1980s, asbestos has been removed or substituted for in all but a small number of construction products.

For example, asbestos is still used, although at low concentrations, in various mastics and roofing materials.

Based on the construction date of the subject property buildings (starting in 1914) asbestos may be present within the onsite building materials. A comprehensive asbestos survey is recommended prior to significant renovation or demolition activities so that these materials, if present, can be properly managed.

5.9.2 Radon

The National Radon Database includes radon information from U.S. EPA/State Residential Radon Surveys conducted between 1986 and 1992. The database includes test results from 14 sites within the subject property zip code area. The average value for radon level reported in this region was less than 0.100 pico curies per liter (pCi/L) of air for the first floor living area. This is lower than the U.S. EPA's recommended action level of 4 pCi/L.

The survey indicates that it is unlikely that radon levels in buildings on the subject property area are above the U.S. EPA action level.

5.9.3 Solid Waste

As noted in Section 5.3, metal shavings are present on the floor throughout the Production Specialties tenant space. No other concerns were observed with respect to solid waste disposal for the subject property.

5.9.4 Lead in Paint

A lead based paint survey was not conducted as part of this Phase I ESA. The Consumer Products Safety Commission limited lead content in residential paint to 0.06 percent (600 parts per million) in 1978. The use of paint containing greater than 0.06 percent lead was also prohibited in areas where consumers have direct access to painted surfaces. Because the construction date of the subject property buildings starts pre-dates 1978, a lead-based paint (LBP) survey is recommended prior to significant renovation or demolition activities so LBP, if present, can be properly managed.

6.0 SUMMARY AND CONCLUSIONS

The subject property consists of one legal parcel covering approximately 0.98 acres and containing one two-story building. The site has addresses of 2044, 2050, and 2060-2070 Bryant Street, and is located in the City and County of San Francisco. The site is bounded to the north by commercial properties including San Francisco Auto Repair and Creative Flooring Design, to the east by Bryant Street, to the south by residences, and to the west by Florida Street.

Historical research conducted for this ESA indicates the site was partially developed with single-family residences until sometime before 1914, at which time an iron works had been constructed on the northern half of the site. By 1946 the subject property was fully developed with the existing building. Currently the site is divided into three occupied tenant spaces; current uses at each address include a machine shop (Production Specialties at 2044 Bryant Street), a multi-purpose commercial-use site (2050 Bryant Street) and theater prop construction and storage (ACT Scenery Shop at 2060-2070 Bryant Street).

2044 Bryant Street: Observations of chemical use and storage inside of 2044 Bryant Street included drums of cutting oils, coolants, and kerosene, and small quantities of both petroleum- and chlorinated-hydrocarbon metal cleaning solvents. A drum labeled as containing hazardous waste oil and coolant was observed. Numerous small containers of used oils were observed throughout the space. Staining and spills on the concrete floor were present at and around machinery and chemical drum dispensers (i.e., cutting oils and kerosene). Site chemical use and storage is regulated under a current HMBP; however a copy of the HMBP was not available at the time of the inspection.

2050 Bryant Street: Small quantities of petroleum-based solvents and a small metal fabrication shop were present inside of 2050 Bryant Street. Section 8 Productions, which performed silk-screening, formerly occupied the space.

2060-2070 Bryant Street: The current theater prop-construction and storage uses included: utilization of woodworking areas with chemical uses including glues, wood-fillers, petroleum-based wood cleaning solvents, stains, and finishes; a metal shop with bench-scale quantities of petroleum-based metal cleaners; and a prop-painting areas with small containers of water-based paints and petroleum-based solvents and thinners stored in flammable cabinets. A small spray booth was also observed.

The subject property is not listed on any regulatory agency databases. In addition, based on a review of available environmental regulatory databases and regulatory agency records for adjacent and nearby properties, PES did not identify significant adjacent/nearby locations of environmental concern to the subject property.

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E 1527-05 of the property located at 2044 through 2070 Bryant Street in San Francisco, California, *the subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 1.3 of this report. This assessment revealed no evidence of recognized environmental condition in connection with the property except for the following:

- Based on: (1) the long-term site use at 2044 Bryant Street as a machine shop (since the 1950s or earlier) and associated usage of oils and metal-cleaning solvents at the site; (2) the use of other portions of the building for steel working, machine shops, and autobody repairs; and (3) evidence of staining and spills on the concrete floor of the 2044 Bryant space, taken as whole these observations constitute a REC due to the potential for releases of hazardous chemicals to the subsurface.

The following noteworthy observations were identified on the subject property during the Phase I ESA research and site inspection:

- Although the site is not located within a block designated by SFDPH as an "Article 20 Affected Block," it is anticipated that redevelopment or construction activities will result in the disturbance of 50 cubic yards or more of soil and the site will therefore be subject to the requirements of the San Francisco Public Health Code Article 22A. Requirements under Article 22A include submittal to SFDPH of site use history and soil analytical data to confirm the presence or absence of fill materials exhibiting characteristics of a hazardous waste. A site mitigation plan may be required to properly address and manage the fill materials, if encountered, during redevelopment;

- Various smaller containers of used oil were observed inside of 2044 Bryant Street. Additionally, used fluorescent lights and corrosive chemicals were observed in a storage room. As part of site housekeeping, it is recommended that the current property owner remove and appropriately dispose of these materials/containers in accordance with local, state and federal requirements;

- While historical environmental documentation regarding USTs at the subject property was not identified, a possible fill port in the sidewalk was observed. Based on a subsequent limited electromagnetic survey performed on June 11, 2013 by C. Cruz Sub-Surface Locators, Inc. of Milpitas, California, a metallic line was identified in-line with the possible fill port. The metallic line was identified extending underneath the sidewalk between the possible fill port and the edge of the building. Additional investigation should be conducted to confirm the presence of absence of a potentially undocumented UST that may be located beneath the floor slab of the subject property at the 2044 Bryant Street site;

- If Production Specialties will cease operations as part of this transaction, the Hazardous Materials Business Permit on file with the Local Oversight Program should be properly closed; and

- Based on the age of the building, there is a potential for the presence of asbestos- and/or lead-containing building materials. As significant renovation or demolition of the existing structure is contemplated as part of site redevelopment, a pre-demolition survey will be required so that these materials, if present, can be properly managed.

7.0 DATA GAPS

PES did not access all interior portions of 2050 Bryant Street (limited portions of the second-story residential area).

8.0 ADDITIONAL SERVICES

No additional services were provided during the preparation of this Phase I ESA.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

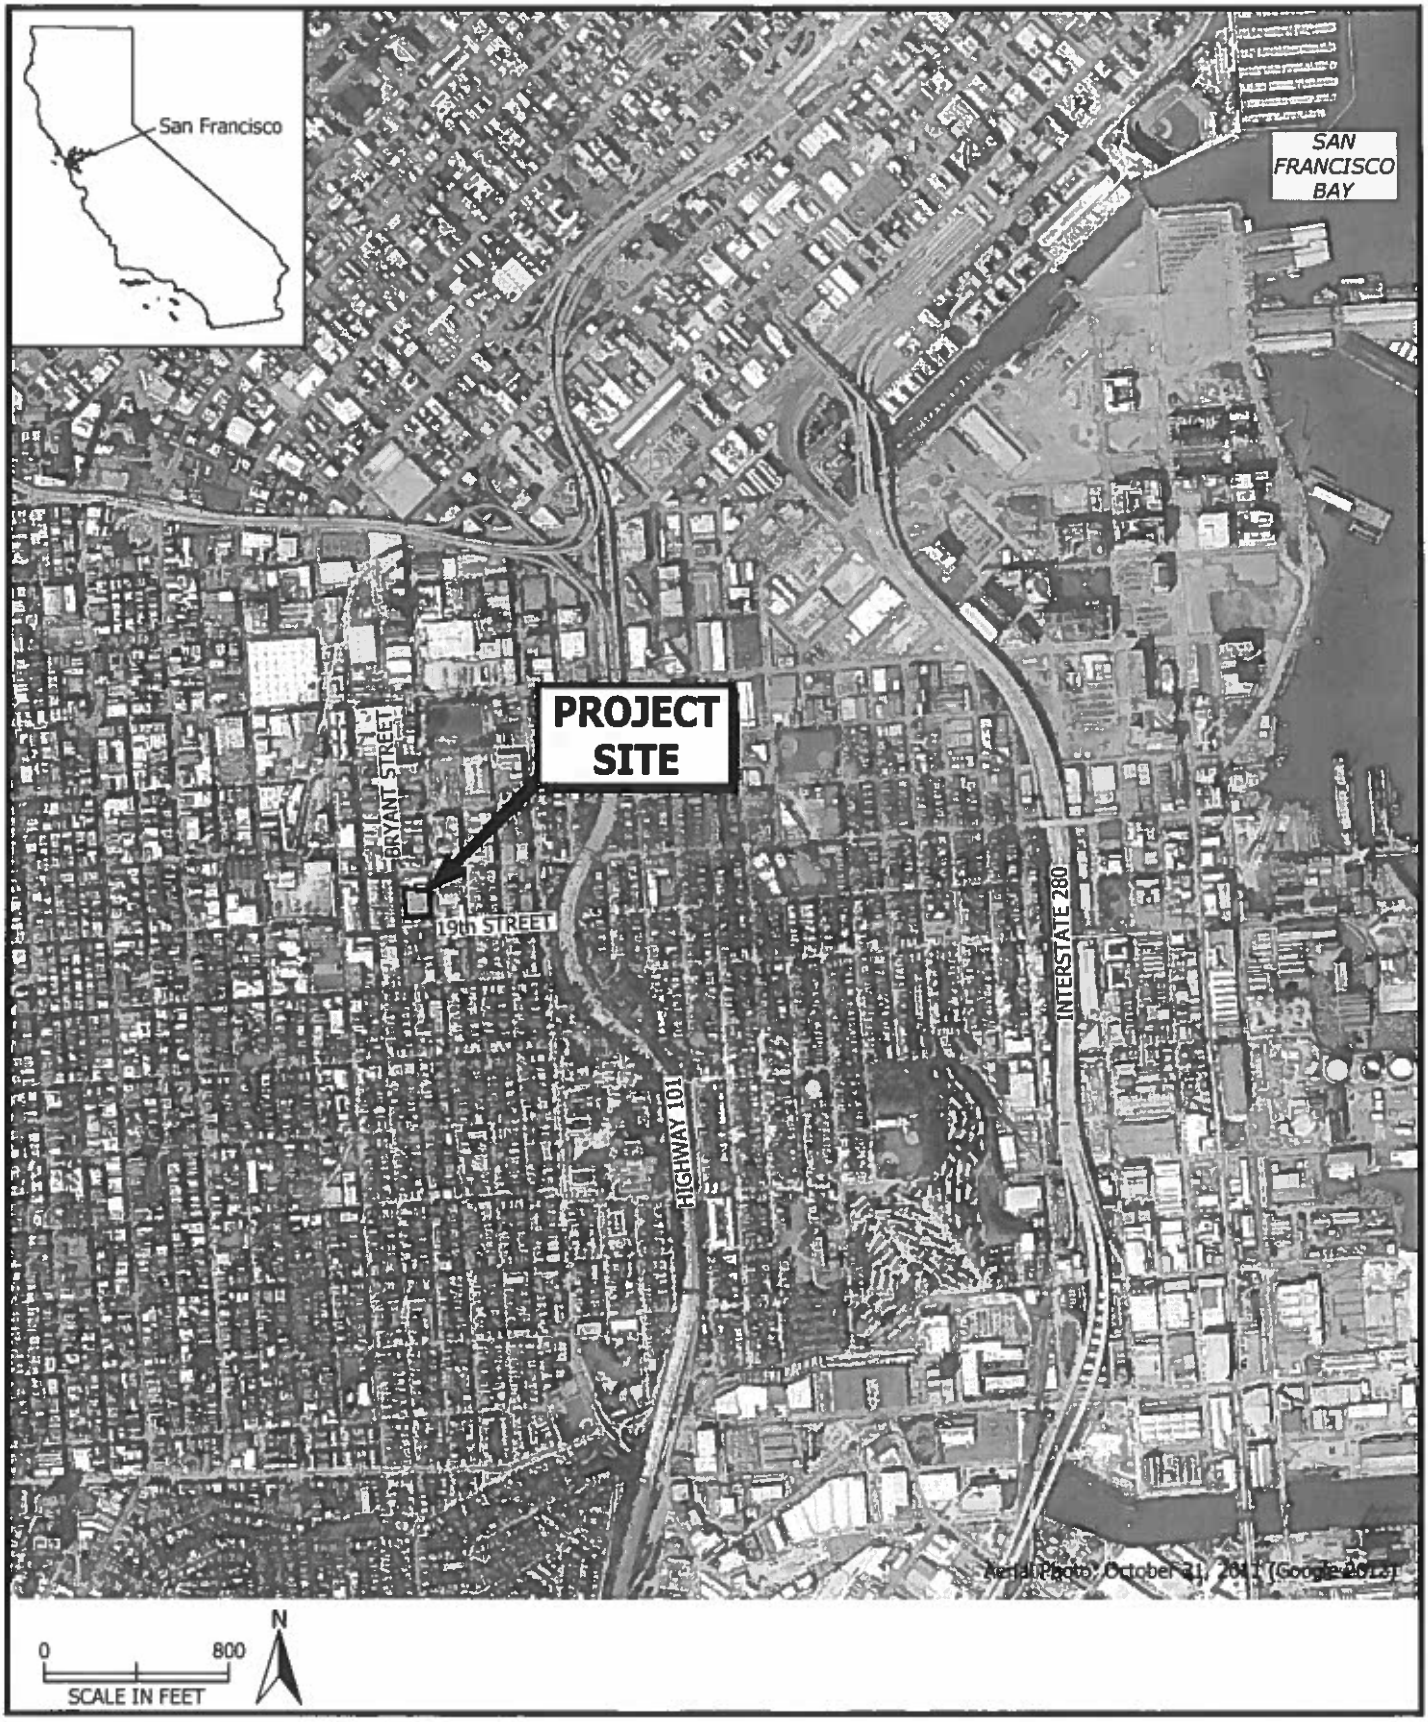

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312.

Resumes of the Environmental Professionals signing this report are presented in Appendix F.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

APPENDIX B

SANBORN FIRE INSURANCE MAPS

Appendix B
Historical Sanborn Fire Insurance Maps Review
2044 Through 2070 Bryant Street
San Francisco, California

Subject Property

Date	Comments:
1889	The map shows the subject site as developed with multiple dwellings, with several vacant lots.
1900	No notable change to subject property compared to 1889 map.
1914	The northern portion of the subject site is now occupied by an iron works with an associated steel warehouse. Residential units are still present at the southern portion of the subject site.
1950	The map shows the subject site structure as it appears today, residential dwellings at the southern portion of the site has been replaced by the warehouse building. Listed occupants include a machine & auto body shop, steel warehouse, and machinery warehouse and sales room.
1975	No notable change to subject property compared to 1950 map.
1987	Tenancy at subject site includes American Conservatory Theater Scene Shop (ACT).
1989	No notable change to subject property compared to 1987 map.
1991	No notable change to subject property compared to 1989 map.
1999	No notable change to subject property compared to 1991 map.

Adjacent Properties

Date	Comments:
1889	The Golden Gate Woolen Mfg Co. is shown to the east and southeast of the subject site. Properties west and northwest of the site are used as cattle yards and include one or two small structures. A school is shown east of the site across Bryant Street.
1900	Solano Street has been renamed 18th Street, and Butte Street has been renamed 19th Street No significant changes are shown compared to the 1889 map, with the exception that Union Brewing is shown on the property north of the subject site, across 18th Street.
1914	The Enterprise Foundry Co. now occupies the property west of the subject site across Florida Street. Korbel Box Factory (cigar boxes) now occupies the space immediately north of the subject site. Union Brewing Co. (across 18th Street) has expanded. A planning mill, laundry company, can company, and cabinet shop now occupies sites to the northwest (across 18th Street). A shoe factory, shirt factory, school, and laundry company now occupy sites to the west of the subject site (across Bryant Street).

Appendix B
Historical Sanborn Fire Insurance Maps Review
2044 Through 2070 Bryant Street
San Francisco, California

1950	Enterprise Engine & Foundry Co. has expanded to occupy the entire lot west of the site and a portion of the lot east of the site. Maypole Dye Works occupies the property southeast of the site across Bryant, and Remler Radio Co has moved in southeast of the site across 19th. A Steam laundry facility is shown on the map to the northeast of the site.
1975	North of site is now used for sheet metal works and storage. Enterprise Foundry Co. is replaced by a smaller Auto Repair business west of the site. The school east of the subject site (across Bryant Street) has been removed and replaced by a stationary supply warehouse.
1987	Changes to land use in the site vicinity include construction of a parking garage east of the site across Bryant Street.
1989	No notable change to subject property vicinity compared to 1987 map.
1991	No notable change to subject property vicinity compared to 1989 map.
1999	No notable change to subject property vicinity compared to 1991 map.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1910 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

2070 BRYANT STREEET
SAN FRANCISCO, CA 94110

COORDINATES

Latitude (North):	37.7610000 - 37° 45' 39.60"

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ..... National Priority List

EXECUTIVE SUMMARY

Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL..... National Priority List Deletions

Federal CERCLIS list

CERCLIS..... Comprehensive Environmental Response, Compensation, and Liability Information System
FEDERAL FACILITY..... Federal Facility Site Information listing

Federal RCRA CORRACTS facilities list

CORRACTS..... Corrective Action Report

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

Federal institutional controls / engineering controls registries

US ENG CONTROLS..... Engineering Controls Sites List
US INST CONTROL..... Sites with Institutional Controls
LUCIS..... Land Use Control Information System

Federal ERNS list

ERNS..... Emergency Response Notification System

State and tribal landfill and/or solid waste disposal site lists

SWF/LF..... Solid Waste Information System

State and tribal leaking storage tank lists

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

State and tribal registered storage tank lists

AST..... Aboveground Petroleum Storage Tank Facilities
INDIAN UST..... Underground Storage Tanks on Indian Land
FEMA UST..... Underground Storage Tank Listing

State and tribal voluntary cleanup sites

INDIAN VCP..... Voluntary Cleanup Priority Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS..... A Listing of Brownfields Sites

Local Lists of Landfill / Solid Waste Disposal Sites

ODI..... Open Dump Inventory

EXECUTIVE SUMMARY

DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations

EDR MGP..... EDR Proprietary Manufactured Gas Plants

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/05/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 12/05/2012 has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 12/05/2012 has revealed that there are 17 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 01/30/2013 has revealed that there are 127 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 12/17/2012 has revealed that there are 52 UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 12/05/2012 has revealed that there is 1 VCP

site within approximately 0.5 miles of the target property.

Local Land Records

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.

A review of the DEED list, as provided by EDR, and dated 12/10/2012 has revealed that there is 1 DEED site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 34 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001

SAN FRANCISCO SERVICE CENTER (Continued) **1000196959**

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

PG&E TREAT ST GARAGE (Continued) **1000199080**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PHASE II ENVIRONMENTAL SITE ASSESSMENT
681 Florida Street
San Francisco, California

1.0 INTRODUCTION

This Phase II Environmental Site Assessment (ESA) was prepared for the proposed development located at 681 Florida Street in San Francisco, California (the "Site"). The current project Site is rectangular with plan dimensions of approximately 200 by 95 feet (0.44 acres). It is bound by Bryant Street on the east, Florida Street on the west, and buildings to the south, and a mixed use development under construction, referred to as "2000 Bryant Street," to the north (Figure 1). The Site was previously part of a larger lot; however, a lot line adjustment was completed on 22 December 2016 dividing the Site into two parcels. The Site is now identified by Assessor's Parcel Number (APN) 40-220-28. It is our understanding that APN 40-220-28 was dedicated to the City of San Francisco Mayor's Office of Housing for affordable housing development. The Site is currently empty and was previously occupied by two-story concrete and brick buildings constructed at grade. The previous buildings were demolished during the construction of 2000 Bryant Street.

The Site is within the Maher Area and therefore subject to the requirements of Article 22A of the San Francisco Public Health Code (Maher Ordinance). Article 22A states that construction projects in San Francisco, which are bayward of the historic 1852 high tide line or within the expanded Maher Area and disturb more than 50 cubic yards of soil, require assessment of the site history (Phase I ESA) and soil quality (Phase II ESA or Environmental Site Characterization (ESC)) of the material that will be encountered during construction in accordance with Article 22A. Previous investigations of properties within the Maher zone have found fill material with elevated levels of metals and petroleum hydrocarbons as a result of the 1906 earthquake and fire.

2.0 PROJECT DESCRIPTION

The proposed development includes a 130-unit housing project for low income and homeless families in the Mission District, including arts-related Production, Design and Repair ("PDR") space on the ground floor. The 681 Florida Street project will include 44 studio, 31 one-bedroom, 38 two-bedroom, and 17 three-bedroom apartments. The ground floor will include offices for management and services staff and a community room. Based on the architectural drawings, prepared by Mithun, Inc. dated 8 June 2018, a partial-basement is

planned on the eastern portion of the project for an electrical room and fire pump. Excavations for the proposed building foundations, remedial grading, and partial-basement could extend as much as 20 feet below existing ground surface (bgs).

3.0 BACKGROUND

Prior to the lot line adjustment, the Site was referred to as 2044 through 2070 Bryant Street during previous environmental investigations. Based on the findings of the Phase I ESA, prepared by PES Environmental, Inc. (PES), for 2044 through 2070 Bryant Street, San Francisco, California, dated 18 June 2013, the Site was primarily vacant with some residential lots as early as 1889. By 1914 the Site was occupied by an iron works, and by 1950 the Site was occupied by the previous two-story concrete and brick buildings (which are now demolished). Previous occupants of the two-story concrete and brick buildings included vehicle companies, machine shops, and other light commercial industries. Most recently, the warehouse and office spaces were formerly used by American Conservatory Theater (ACT) to store, construct, and fabricate items for theater productions.

4.0 PREVIOUS REPORTS

In preparation of this Phase II ESA, we have reviewed the following reports and documents:

- PES Environmental, Inc., Phase I Environmental Site Assessment, 2044 through 2070 Bryant Street, San Francisco, California, dated 18 June 2013.
- PES Environmental, Inc., Results of Limited Subsurface Investigation, 2044 through 2070 Bryant Street, San Francisco, California, dated 31 July 2013.
- PES Environmental, Inc., Site Mitigation Plan, 2044 through 2070 Bryant Street, San Francisco, California, dated 27 August 2013.
- San Francisco Department of Public Health, Site Assessment and Mitigation (DPH SAM), Environmental Document Review, 2040–2070 Bryant Street, San Francisco, California SMED 960 dated 9 October 2013.
- PES Environmental, Inc., Site Mitigation Plan Addendum, 2070 Bryant Street, San Francisco, California, dated 21 May 2014.
- City and County of San Francisco (SFDPH), Conditional Site Mitigation Plan Approval, Conceptual Planned Development, 2000-2030, 2044-2070 Bryant Street, 2813-2815 18th Street and 611 Florida Street, San Francisco, California, dated 21 July 2014.

- Langan Engineering and Environmental Services, Inc., Phase I Environmental Site Assessment, 2000 and 2070 Bryant Street, San Francisco, California, dated 15 August 2017.

- Langan Engineering and Environmental Services, Inc., Geotechnical Investigation, 681 Florida Street, San Francisco, California, dated 23 October 2017.

In April 2013, PES drilled a total of 4 exploratory borings on or in the direct vicinity of the Site (then referred to as 2060-2070 Bryant) for the collection and analysis of soil and groundwater samples. Soil samples were collected between 2.0 and 5.0 feet below the ground surface (bgs). No Total Petroleum Hydrocarbons (TPH) quantified as gas (TPHg), quantified as diesel (TPHd), or quantified as motor oil (TPHmo) were detected above laboratory reporting limits in any of the samples analyzed. No Volatile Organic Compounds (VOCs) or Polychlorinated Biphenyls (PCBs) were detected above the laboratory reporting limits in any of the soil samples analyzed. Detected concentrations of total metals were below the San Francisco Bay Regional Water Quality Control Board (RWQCB), Environmental Screening Levels, Direct Exposure Human Health Risk Levels (Table S-1), Residential Shallow Soil Exposure, dated February 2016 (Residential ESLs), or background levels in all soil samples except for one sample. Lead was detected above the Residential ESL at one location with a concentration of 160 milligrams per kilogram (mg/kg) exceeding the residential ESL of 80 mg/kg. No soluble testing was performed by PES to determine if concentrations of lead exceeded State or Federal hazardous waste criteria.

Groundwater analytical results indicated the presence of elevated concentrations of dissolved metals, TPH, and VOCs exceeding Residential ESLs. Based on current development plans, groundwater will most likely be encountered during construction in quantities that require its removal for the excavation of the partial basement structure. One VOC in groundwater, trichloroethene (TCE) detected at concentrations ranging from 35 micrograms per liter (µg/L) to 75 µg/L, exceeded the RWQCB Groundwater Vapor Intrusion Human Health Risk Level for shallow groundwater in the residential land use scenario of 5.6 µg/L. As a result, the San Francisco Department of Public Health (SFDPH) in their letter dated 9 October 2013 requested that a vapor mitigation system (VMS) be included in future building design to mitigate intrusion of soil vapor. The vapor mitigation systems (VMS) consists of a continuous, spray-applied vapor barrier membrane located immediately beneath the structural building slab, combined with a horizontal collection and venting system installed below the vapor barrier membrane to allow any soil vapors that would otherwise collect beneath the slab to migrate and vent to the atmosphere outside the building.

5.0 FIELD INVESTIGATION

Langan performed a subsurface investigation on 31 May 2018, to evaluate the quality of the material (soil and groundwater) that will be encountered during construction in accordance with Article 22A. In addition, soil samples were analyzed for constituents to satisfy soil profiling scenarios generally accepted by landfills, and a groundwater sample was analyzed for general compliance with the San Francisco Public Utilities Commission (SFPUC) batch wastewater discharge permit requirements for construction dewatering and discharge.

On 31 May 2018, four exploratory borings, EB-1 through EB-4, were advanced to depths of approximately eight to 20 feet bgs at the locations shown on Figure 2. Prior to initiating the field activities, Underground Service Alert North 811 (USA North) was notified and a private utility locator was employed to confirm locations of underground utilities prior to intrusive activities. Under a permit from SFDPH, all drilling activities were performed by Gregg Drilling and Testing, Inc. of Martinez, California. The soil cores were visually logged by Langan in general accordance with the Unified Soil Classification System (USCS), working under the supervision of a California licensed professional geologist. The locations and depths of the soil borings were based on the proposed building footprint to provide roughly equal lateral and vertical coverage, where soil will likely be excavated during future development.

Soil samples were collected from each boring by a hydraulically driven direct push drill rig advancing a continuous four-foot (ft.) long Macro-core soil sampler (or similar) with an acetate sleeve to a depth of approximately eight feet bgs. Soil samples were collected at approximately 2.0, 4.0, 6.0, and 8.0 feet bgs and every 2.0 feet bgs until the terminus of the deeper boring for the partial-basement (EB-3) at 20 feet bgs. Approximately six-inch sample lengths were cut from the liners and ends were covered with Teflon, sealed with plastic end caps, labeled, and stored in an ice-cooled chest for delivery to McCampbell Analytical, Inc. (McCampbell) a California Department of Health Services certified analytical laboratory in Pittsburg, California. All samples were delivered under chain-of-custody procedures. Boring logs from this investigation are presented in Appendix A as Figures A-1 through A-4. The soil encountered was classified in accordance with the soil classification chart on Figure A-5. Upon completion of the soil sampling, the boreholes were backfilled with neat cement grout under the supervision of the SFDPH grout inspector.

Originally grab groundwater samples were proposed to be collected at two locations (EB-2 and EB-3). However, due to low flow groundwater conditions, three grab groundwater samples were collected as follows; EB-2-GW, EB-3-GW, and GW-1. GW-1 was collected from multiple

locations (EB-1 through EB-4) to assist in collecting sufficient volume to complete the analytical schedule. To facilitate the collection of groundwater samples, a temporary ¾-inch diameter, Schedule 40 polyvinyl chloride (PVC) casing with a section of 0.010-inch screen was installed within the borehole. Groundwater samples were collected directly into laboratory-supplied sample containers, using a peristaltic pump. Samples were appropriately labeled and stored in an ice-cooled chest until delivery to McCampbell.

6.0 SUBSURFACE CONDITIONS

Subsurface conditions are based on our subsurface investigation and the previous geotechnical investigations completed by Langan for the adjacent 2000 Bryant Street development. The explorations performed at the project Site indicate the presence of about 13 to 14 feet of fill. The fill consists of a heterogeneous mix of loose to dense gravel, and sand, with occasional thin layers of medium stiff to stiff silt, and clay, and contains debris including concrete, wood, and potentially serpentinite rock fragments. No serpentinite rock fragments were observed in the fill material during the subsurface investigation. Beneath the fill are interbedded alluvial soils consisting of stiff to very stiff sandy clay and medium dense to dense sand with silt or varying amounts of clay to depths of approximately 27 to 28 feet bgs. These alluvial soils are underlain by the Colma formation. The Colma formation extends to a depth of approximately 67 feet bgs, and consists of medium dense to very dense sand with varying amounts of clay and silt. Groundwater was encountered at approximately 8 to 10 feet bgs at the time of drilling during the 2018 investigation.

7.0 SAMPLE SELECTION AND ANALYTICAL TESTING

The Phase II ESA sampling and analytical testing was chosen to satisfy Article 22A requirements and profiling scenarios generally accepted by landfills.

7.1 Soil Testing

To assess the potential for soil contamination resulting from past activities and nearby off-Site operations, selected soil samples were analyzed for some or all of the following compounds listed below.

- TPHg, TPHd, and TPHmo by EPA Method 8015M;
- VOCs by EPA Method 8260B;
- Semi-volatile organic compounds (SVOCs) by EPA Method 8270C;

- Asbestos by California Air Resource Board (CARB) 435 Method;
- Organochlorine pesticides (OCPs) by EPA Method 8081A;
- PCBs by EPA Method 8082;
- pH by EPA Method 9045C;
- Total cyanide by EPA Method 4500;
- Acid soluble sulfides by EPA Method 4500;
- California Assessment Manual (CAM) 17 metals by EPA Method 6020; and
- Leaking Underground Fuel Tank (LUFT) 5 metals by EPA Method 6010/7000.

Samples with concentrations of any metal greater than ten times the soluble threshold limit concentration (STLC) were also analyzed for soluble metals using the California waste extraction test (WET) method. Any total threshold limit concentration (TTLC) concentration exceeding 20 times the STLC value, or if the STLC value after analysis with the WET method exceeded the State of California hazardous waste criteria the sample was submitted for analysis by the Federal toxicity characteristic leaching potential (TCLP). These analyses were necessary to assess if metal concentrations in soil exceed State and/or Federal hazardous waste criteria.

7.2 Groundwater Testing

Groundwater was sampled to assist obtaining a future SFPUC batch wastewater discharge permit for disposal of groundwater during potential construction dewatering, and to satisfy SFPDH Article 22A requirements. The groundwater samples were analyzed for some or all of the following:

- TPHg, TPHd, and TPHmo by EPA Method 8015M;
- VOCs by EPA Method 8260B;
- SVOCs by EPA Method 8270C;
- OCPs by EPA Method 8081A;
- PCBs by EPA Method 8082;
- Total CAM 17 metals by EPA Method E200.8;

- Dissolved CAM 17 metals by EPA Method E200.8;
- Total suspended solids (TSS) by EPA Method SM2540;
- Chemical oxygen demand (COD) by EPA Method SM5220;
- Phenolics by EPA Method E420.4;
- pH by EPA Method SM4500;
- Total Cyanides by EPA Method SM4500;
- Dissolved sulfides by EPA Method SM4500; and
- Flashpoint by EPA Method SW1010.

8.0 LABORATORY TEST RESULTS AND EVALUATION

The laboratory analytical results are discussed below and summarized on Tables 1 through 4. Copies of the certified laboratory analytical reports are presented in Appendix B.

8.1 Soil Analytical Results Non-Metals

Soil analytical results for parameters other than metals are summarized in Table 1. TPHd was detected in four of the 11 samples analyzed at concentrations ranging from 1.0 milligram per kilogram (mg/kg) to 5.0 mg/kg. TPHmo was detected in four of the 11 samples analyzed at concentrations ranging from 5.2 mg/kg to 130 mg/kg. Low concentrations of the SVOC Phenol were detected in two of the six samples analyzed at concentrations of 0.016 mg/kg and 0.84 mg/kg. No other SVOCs were detected above laboratory reporting limits in the samples analyzed. pH was detected at 8.42 standard units (S.U.) in the one sample analyzed. No TPHg, VOCs, OCPs, PCBs, cyanide, sulfides, or asbestos were detected in any of the samples analyzed.

8.2 Soil Analytical Results Metals

The metal analytical results are summarized in Table 2. Total lead was detected at or above the laboratory reporting limits in each of the 11 samples analyzed at concentrations ranging from 1.4 mg/kg to 4.4 mg/kg (Table 2). Total lead was not detected at concentrations above 50 mg/kg; therefore, no samples were analyzed for STLC or TCLP lead to determine soluble lead levels.

Total chromium was detected at or above the laboratory reporting limit in each of the 11 samples analyzed at concentrations ranging from 27 mg/kg to 110 mg/kg (Table 2). Total chromium was detected at concentrations above 50 mg/kg (10 times the STLC) but below 2,500 mg/kg (TTLC) in five of the soil samples. These five samples were subsequently analyzed for STLC and TCLP chromium (if necessary) to determine soluble chromium levels. STLC chromium was detected in two of the five samples analyzed at concentrations of 0.19 milligrams per liter (mg/L) and 0.36 mg/L. TCLP chromium was not detected above the laboratory reporting limit in the one sample analyzed. None of the solubility results exceeded the State of California or Federal hazardous waste criteria of 5 mg/L (Table 2).

The remaining metal concentrations were within normal[1] background ranges found in the western United States[1].

8.3 Groundwater Analytical Results

Due to low flow groundwater conditions, three grab groundwater samples were collected as follows; EB-2-GW, EB-3-GW, and GW-1. GW-1 was collected from multiple locations (EB-1 through EB-4) to assist in collecting sufficient volume to complete the analytical schedule. TPHd was detected in groundwater sample EB-3-GW at a concentration of 160 µg/L. TCE was detected in groundwater sample EB-2-GW at a concentration of 16 µg/L. No other VOCs, SVOCs, OCPS, PCBs, or dissolved sulfides were detected above laboratory reporting limits in the groundwater samples analyzed. The groundwater analytical results for cyanide, phenolics, COD, TSS, flashpoint, and pH are summarized in Table 3 (non-metals). Total and dissolved metals were detected in both of the samples analyzed (Table 4).

9.0 CONCLUSIONS AND PRELIMINARY RECOMMENDATIONS

The results from Langan's May 2018 Phase II ESA indicated that the Site is underlain by a layer of fill material with low concentrations of petroleum hydrocarbons and heavy metals. No hazardous soil was detected during this subsurface investigation. The results of the environmental investigation indicate that TCE, a VOC, was detected at concentration of 16 µg/L, which exceeds the RWQCB Groundwater Vapor Intrusion Human Health Risk Level for shallow groundwater in the residential land use scenario (5.6 µg/L). Because TCE was not detected in soil samples collected from the Site, the TCE detected in groundwater is likely associated with an off-Site source. The SFDPH may request that a VMS be included in future

[1] Environmental Resources Management. *Feasibility Study, Hookston Station, Pleasant Hill, California*. Appendix A, Table A-2, "Comparison of Background Concentrations of Metals in Bay Area Soils," July 2006.

building design to mitigate intrusion of soil vapor, or that further soil vapor sampling and testing may need to be performed to confirm the vapor intrusion human health risk levels in soil vapor beneath the Site.

The fill material that will be excavated and disposed of off-site during construction activities will most likely be disposed of as Class II non-hazardous waste. Native material beneath the fill layer is typically disposed of as Class III unrestricted material. Final soil acceptance is dependent on the receiving landfill or facility's acceptance criteria. Groundwater was encountered between eight to ten feet bgs beneath the Site, and the proposed construction activities have the potential to encounter groundwater in quantities that will require its removal from the subsurface. If dewatering and removal of groundwater is required for construction; a permit should be obtained from SFPUC prior to any groundwater discharge. Based on the available data, it is unlikely that the groundwater would require treatment prior to disposal (excluding a settling tank for suspended solids). SFPUC determines final acceptance of the groundwater into the combined sanitary sewer system according to the guidelines established in the SFPUC *Batch Wastewater Discharge Permit Requirements* dated 18 May 2012.

Because fill material and contaminated groundwater exists beneath the Site, a SMP and a HASP (prepared by others) should be prepared and implemented prior to construction. The SMP will provide recommended measures to mitigate the long-term environmental or health and safety (H&S) risks caused by the presence of fill material and contaminated groundwater beneath the Site. The HASP will outline proper soil and groundwater handling procedures and health and safety requirements to minimize worker and public exposure to fill materials and contaminated groundwater during construction. The presence of fill material and contaminated groundwater pose soil and groundwater management and potential health risks to be addressed as part of the Site development activities. The SMP objectives will be to minimize exposure to construction workers, nearby residents and/or pedestrians, and future site users to constituents in the soil and groundwater.

10.0 LIMITATIONS

Descriptions of specific field activities and historical events are based on our observations and on information provided by others. The opinions and information presented in this report apply to site conditions and the information that was available at the time the work was performed and do not apply to changes of which we are not aware or have not had the opportunity to evaluate. Langan makes no guarantees or warranties with respect to the accuracy or completeness of this information.

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size)	Gravels (More than half of coarse fraction > no. 4 sieve size)	GW	Well-graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	SW	Well-graded sands or gravelly sands, little or no fines
		SP	Poorly-graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
Fine -Grained Soils (more than half of soil < no. 200 sieve size)	Silts and Clays LL = < 50	ML	Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL	Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	MH	Inorganic silts of high plasticity
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic silts and clays of high plasticity
Highly Organic Soils		PT	Peat and other highly organic soils

GRAIN SIZE CHART

Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel	3" to No. 4	76.2 to 4.76
coarse	3" to 3/4"	76.2 to 19.1
fine	3/4" to No. 4	19.1 to 4.76
Sand	No. 4 to No. 200	4.76 to 0.075
coarse	No. 4 to No. 10	4.76 to 2.00
medium	No. 10 to No. 40	2.00 to 0.420
fine	No. 40 to No. 200	0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

Unstabilized groundwater level

Stabilized groundwater level

SAMPLE DESIGNATIONS/SYMBOLS

Sample taken with Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter. Darkened area indicates soil recovered

Classification sample taken with Standard Penetration Test sampler

Undisturbed sample taken with thin-walled tube

Disturbed sample

Sampling attempted with no recovery

Core sample

Analytical laboratory sample

Sample taken with Direct Push or Drive sampler

SAMPLER TYPE

C Core barrel

CA California split-barrel sampler with 2.5-inch outside diameter and a 1.93-inch inside diameter

D&M Dames & Moore piston sampler using 2.5-inch outside diameter, thin-walled tube

O Osterberg piston sampler using 3.0-inch outside diameter, thin-walled Shelby tube

PT Pitcher tube sampler using 3.0-inch outside diameter, thin-walled Shelby tube

S&H Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter

SPT Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and a 1.5-inch inside diameter

ST Shelby Tube (3.0-inch outside diameter, thin-walled tube) advanced with hydraulic pressure

CERTIFIED ANALYTICAL LABORATORY REPORTS

McCampbell Analytical, Inc.
"When Quality Counts"

Analytical Report

WorkOrder: 1806055

Report Created for: Langan

555 Montgomery St., Suite 1300
San Francisco, CA 94111

Project Contact: Adam Brown
Project P.O.:
Project: 750615606; 681 Florida Street

Project Received: 06/01/2018

Analytical Report reviewed & approved for release on 06/08/2018 by:

Angela Rydelius
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750615606; 681 Florida Street
WorkOrder: 1806055

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750615606; 681 Florida Street
WorkOrder: 1806055

Analytical Qualifiers

S	Surrogate spike recovery outside accepted recovery limits
a3	Sample diluted due to high organic content.
e2	Diesel range compounds are significant; no recognizable pattern
e6	One to a few isolated peaks present in the TPH(d/mo) chromatogram
e7	Oil range compounds are significant
j1	See attached narrative
k10	CARB 435 Exception 1 - No asbestos detected

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD is out of acceptance criteria.
F3	The surrogate standard recovery and/or RPD is outside of acceptance limits.
F5	LCS recovery is outside of acceptance limits; however, the data is acceptable by NELAP criteria.
F10	MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix.
F11	DLT outside control limits. Physical or chemical interferences exist due to sample matrix. Sample results may be estimates.

Case Narrative

Client: Langan
Work Order: 1806055
Project: 750615606; 681 Florida Street
June 11, 2018

j1) The soil surrogates spiked in batches 159208 & 159235 for EPA 8260 was spiked 10 times lower in the extraction solvent. Therefore, the recoveries for the following surrogates should be considered out to 10% versus 100%:
Benzene-d6
Ethylbenzene-d10
1,2-DCB-d4

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750615606; 681 Florida Street
WorkOrder: 1806062

Analytical Qualifiers

F	Sample was filtered upon arrival to the lab
H	Samples were analyzed out of holding time
a1	Sample diluted due to matrix interference
a19	Reporting limit near, but not identical to our standard reporting limit due to variable sample volume
b1	Aqueous sample that contains greater than ~1 vol. % sediment

Quality Control Qualifiers

F1	MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.
F2	LCS/LCSD recovery and/or RPD is out of acceptance criteria.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

Chain of Custody (COC) Information

Chain of custody present?	Yes	☑	No	☐		
Chain of custody signed when relinquished and received?	Yes	☑	No	☐		
Chain of custody agrees with sample labels?	Yes	☑	No	☐		
Sample IDs noted by Client on COC?	Yes	☑	No	☐		
Date and Time of collection noted by Client on COC?	Yes	☑	No	☐		
Sampler's name noted on COC?	Yes	☑	No	☐		
COC agrees with Quote?	Yes	☐	No	☐	NA	☑

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes	☐	No	☐	NA	☑
Shipping container/cooler in good condition?	Yes	☑	No	☐		
Samples in proper containers/bottles?	Yes	☑	No	☐		
Sample containers intact?	Yes	☑	No	☐		
Sufficient sample volume for indicated test?	Yes	☑	No	☐		

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes	☐	No	☑	NA	☐
Samples Received on Ice?	Yes	☑	No	☐		
(Ice Type: WET ICE)						
Sample/Temp Blank temperature	Temp: 2.4°C				NA	☐
Water - VOA vials have zero headspace / no bubbles?	Yes	☑	No	☐	NA	☐
Sample labels checked for correct preservation?	Yes	☑	No	☐		
pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)?	Yes	☑	No	☐	NA	☐
UCMR Samples:						
pH tested and acceptable upon receipt (200.8: ≤2; 525.3: ≤4; 530: ≤7; 541: <3; 544: <6.5 & 7.5)?	Yes	☐	No	☐	NA	☑
Free Chlorine tested and acceptable upon receipt (<0.1mg/L)?	Yes	☐	No	☐	NA	☑

Comments: Sample EB-2-GW was not received. Method SM4500H+B (pH) was received past its 0.01-day holding time.
