Re: Phase I Environmental Site Assessment
PARCEL S Lot 034 Block 0838
San Francisco, California

John Carver Consulting ("JCC") is pleased to submit this copy of our Phase I Environmental Site Assessment on the above-referenced property. This report outlines the findings of JCC's site reconnaissance, historical land use research, review of governmental records, and interviews.

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in § 312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. JCC has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Please contact the undersigned should there be any questions.

Sincerely,
John Carver Consulting

John Carver

EXECUTIVE SUMMARY

PARCEL S Lot 034 Block 0838
San Francisco, California

The site was initially developed as a residential property in the 1880s and remained so until the 1950s or 1960. It was cleared of all structures and became a State owned parcel which was part of the state freeway system.

The freeway system was razed, became vacant in the late 1990s and has remained vacant to the present with no registered or documented uses.

There is no physical or documentary evidence of any use, storage or disposal of any chemicals, hazardous materials, reportable substances or hazardous waste at the site.

The site may be subject to the requirement of the Maher Ordinance. The Ordinance was originated to address situations of artificial fill and historic industrial and commercial activities which may have involved hazardous materials. The Ordinance may be applied to sites where there is a change of use.

The site is located within an mixed-use area of San Francisco. There have been, are and may be various businesses, such as automotive repair facilities, commercial activities and contractors in such an area which may be environmental concerns to the site as well as to any property in the nearby area. Many such businesses may use, store, generate and dispose of hazardous materials. No Recognized Environmental Concerns were identified in the nearby areas.

This Phase I Environmental Site Assessment report is compliant with ASTM Designation E1527-05, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process"; U.S. EPA's "Standards and Practices For all Appropriate Inquiries" (40 CFR Part 321); and the Federal Small Business Liability Relief and Brownfields Revitalization Act (January 11, 2002). JCC declares that all-appropriate inquiries in conformance with the standards and practices have been developed and performed during the preparation of this report.

Based on all appropriate inquiries carried out during the preparation of this report, it is our opinion that there are no Recognized Environmental Concerns associated with this property.

Recommendations

There is no evidence that any additional environmental investigation at this site is warranted at this time.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

PARCEL S Lot 034 Block 0838
San Francisco, California

1.0 INTRODUCTION

As authorized, John Carver Consulting (JCC) conducted a Phase I Environmental Site Assessment of the property which is known as Parcel S in San Francisco, California. The property is a single parcel and is identified as Lot 034 of Block 0838 as shown on the City Assessors web site.

1.1 Purpose

The Phase I Environmental Site Assessment is being conducted at this time to provide environmental information and may be used in due diligence, future planning and financial activities.

1.2 Involved Parties

John Carver was the principal research engineer, preparer and reviewer of this Phase I Environmental Site Assessment. A copy of the John Carver resume is attached as part of Appendix B. John Carver is an Environmental Professional (EP) as described in ASTM Designation E1527-00 and U.S. EPA's 40 CFR Part 312. The current property owner is the State of California. Currently the property is vacant and undeveloped.

The "User" of the Phase I is the BUILD INC company, potential purchasers of the property.

The User and their agents, may rely upon the contents, conclusions and recommendations of this Phase I Environmental Site Assessment Report in arriving at decisions regarding the property at the time of publication. The data in this report may be time sensitive and should only be relied on for limited time periods. If the information in this report is to be used in any manner after six months of publication, the appropriateness of the Phase I report should be evaluated by John Carver Consulting or a qualified Environmental Professional.

No other parties, other than those designated by the User, may rely on the information herein for any purpose.

A third party vendor, Environmental Data Resources (EDR) compiled addresses and businesses appearing on various regulatory agency lists which could have an adverse environmental effect on the subject property. EDR also provided proprietary copies of Sanborn Insurance Maps of the property, aerial photographs and an abstract of business directory addresses and names.

1.3 Scope of Work

The major objectives of the Phase I Environmental Site Assessment are to identify possible environmental concerns related to on-site or nearby chemical use, storage, handling, spillage, and/or on-site disposal, with particular focus on potential degradation of soil or groundwater quality. This assessment also addresses past and present land usage and operating practices at and near the site, and the potential for migration of chemicals, contaminants and toxics onto the site from reported chemical releases on properties in the vicinity of the site or from observed chemical storage on adjacent properties.

The field services portion of this Assessment consisted of a site visit to the property along with a walk through of the nearby area streets. The objectives of the site visit were to inspect the property, observe the present usage of the site from an environmental standpoint, and interview persons knowledgeable about the site.

An historical review of the subject site's prior usage and operations was carried out to identify potential sources and practices which could involve toxic or hazardous materials or conditions. This review included obtaining and reviewing selected aerial photographs interviews of personnel familiar with the site, and review of public historic records. Because of the administrative situations regarding the property, the Environmental Questionnaire which is normally completed by a knowledge representative of the current property owner is not considered appropriate. The data gap incurred by such exclusion is minor and based on the amount of due diligence will not affect the conclusions of this assessment.

JCC obtained and reviewed database contents from Environmental Data Resources of addresses and businesses appearing on various regulatory agency lists which could have an adverse environmental effect on the subject property.

The scope of work for this Assessment did not include sampling or analysis of soil at the property, testing the property for the possible presence of asbestos-containing materials, lead, PCB-containing equipment, natural hazards such as radon and methane gases, or potential damage from earthquake or floods.

Financial information was not collected and reviewed as part of this Assessment as John Carver Consulting is not qualified for evaluation of such.

It is our opinion that the scope of work carried out during the preparation of this report is in accordance with ASTM E1527-05 standard. A copy of the John Carver Resume and current credentials are attached in Appendix B.

1.4 Data Gaps

According to § 3.3.20 of ASTM Standard E 1527-05 a data gap is a lack of or inability to obtain information required by the ASTM Standard despite good faith efforts to gather

same. Data gaps may result from incompleteness in any of the activities required by the ASTM Standard. The following data gaps occurred in connection with this report:

Data Gap	Explanation	Significance of Gap
Site History	History not conducted back to a time when the site was undeveloped land (See § 5)	Low - not likely to alter Report's conclusions due to JCC's search of standard historical sources of information such as aerial photographs, historic topographic maps, city directory abstracts, Sanborn Fire Insurance Maps, reviews of previous investigations and interviews with knowledgeable individuals who were familiar with the property.
Site History	Site history not conducted in 5-year intervals (See § 5)	Low - not likely to alter Report's conclusions
Questionnaire	Not completed due to administrative conditions	Low - not likely to alter Report's conclusions
Former Owners or Operator Interview	Unable to interview some former site owners and operators due to inability to locate and administrative conditions.	Low - not likely to alter Report's conclusions

2.0 SITE DESCRIPTION

2.1 Physical Conditions

The subject site is a rectangular shaped property of about 3,053 square feet located along the east side of the Octavia Boulevard complex, just south of Lily Street in San Francisco, California. The site extends from the Lily Street frontage south to the Page Street frontage. The general location of the site is shown on the Vicinity Map, Figure 1 of Appendix A. The site boundaries are shown on Figure 2 of Appendix A.

A plan showing the site with respect to the surrounding properties and streets is shown on the Site Plan, Figure 2 of Appendix A.

The site is a single vacant lot with no addresses currently associated with it.

There are no basements or infrastructure associated with the property. There is a paved sidewalk/access area along the three street frontages. Photographs of the site and surrounding area are shown on Figure 3 of Appendix A.

The site is at an elevation of about 73 feet above Mean Sea Level (MSL) as shown on USGS data. In many areas, near-surface groundwater flow direction coincides with topography. Because of the topography of the area, and the presence of an arm of San Francisco Bay the general groundwater gradient of the area is inferred to be toward the southeast. A copy of the site area of the USGS data is attached in Appendix A as Figure 4.

The site is located in an area of Dune Sand (Qd) described in U.S. Geological Survey data as well sorted fine to medium sand with a maximum thickness of 150 feet. Groundwater in the area is thought to be about at least 30 to 50 feet below ground surface.

2.2 Administrative Conditions

The property is owned by The STATE OF CALIFORNIA. Currently the property is vacant and is associated with the shoulders and rights of way of the Octavia Boulevard/Street improvement and freeway approach system.

There are no records of Environmental Liens against the subject property. The NPL Recovery Database (US EPA) and the Deed Database (Deed Restriction Database maintained by the California DTSC) were reviewed to determine the presence of any environmental associated liens. None were found.

There were no Federal or State environmental "activity or use limitation" (AULs) in place for this property. The negative AUL statement is based on the review of the databases particularly the U.S. EPA's Engineering Controls and the Institutional Controls. Any State AULs would be included in the DTSC database entitled ENIVROSTOR. There are no Tribal databases in California concerning AULs.

The Maher Ordinance is not a limitation but is a local ordinance which provides environmental guidelines to be used when there is significant soil disturbance at a property or if there is a change of use.

3.0 SITE HISTORY

3.1 General History

The site is in an urban mixed-use area of San Francisco often identified as the Western Addition. The area of the site was developed by 1886 with various residential structures occupying most of the land. It and most of the surrounding area was residential or small shops until the 1960s, when a elevated freeway structure was constructed directly over

and/or adjacent to the property. All of the infrastructure was removed for the construction.

Sometime between 1998 and 2005, the elevated freeway structure was razed and an improvement/realignment of the Octavia Boulevard right of way instituted and the parcels which had been part of the freeway system owned by the State Of California were exposed and available for use.

Since the freeway was razed, the various parcels have been used for various purpose including vacant lots, equipment/material storage and community gardens.

There were no references found of any industrial or commercial activity at the site or adjacent to the site.

3.2 Aerial Photograph Review

This review involved obtaining and reviewing selected aerial photographs showing the site for the years 1931, 1938, 1946, 1956, 1968, 1974, 1982, 1993, 1998, 2005, 2009, 2010 and 2012. The scale and resolution vary making detail observations of individual properties difficult to impossible. Copies of selected aerial photographs are attached as Appendix C.

The subject site appears to have been occupied by residential buildings since the 1931 photograph. Most of the surrounding areas appear to be residential with scattered neighborhood type businesses.

The site and surrounding neighborhoods remained essentially the same until 1968 when the newly constructed freeway system dominated the area. The structure appears to have obliterated the site and was incorporated into the freeway infrastructure.

By the 1998 photograph, portions of the freeway system to the north had been demolished and by the 2005 photograph, the freeway system north of Market Street was totally razed and the Octavia Boulevard improvements were in place.

The site itself appears to be vacant and undeveloped in the 2005 and all subsequent photographs.

3.3 Sanborn Map Review

Sanborn Maps have been prepared for the Insurance Industry on a regular basis for parts of the San Francisco area since 1886. They identify the location of infrastructure, major structures and their uses, and other related geographic information. Sanborn Maps covering the time span of 1886 to 1999 for the site were available and were reviewed. The findings of this review are summarized below. Copies of selected Sanborn Maps are included as Appendix D.

Year	Subject Property	Adjacent and Surrounding Properties
1886	Lots are different but the area is occupied with dwellings and a "2 storefront and saloon" building at the south of the site.	Residential neighborhood in all nearby areas with scattered storefront service businesses.
1899	There are no significant changes seen to the site area.	There are no significant changes seen in the nearby areas.
1913	There are no significant changes seen to the site area.	There are no significant changes seen in the nearby areas.
1950 (next available map).	There are no significant changes seen to the site area.	There are no significant changes seen in the nearby areas.
1967	A reinforced concrete viaduct which was part of the freeway system is seen over the subject site	With the exception of the "Viaduct" constructed over the alignment which obliterated all structures below and immediately adjacent to it, there are no significant changes seen in the nearby areas.
1974	The subject property is unchanged from the previous Sanborn map.	There are no significant changes seen in the nearby areas.
1987	The subject property is unchanged from the previous Sanborn map.	There are no significant changes seen in the nearby areas.
1989	The subject property is unchanged from the previous Sanborn map.	There are no significant changes seen in the nearby areas.
1991	The subject property is unchanged from the previous Sanborn map.	There are no significant changes seen in the nearby areas.

Year	Subject Property	Adjacent and Surrounding Properties
1999	The viaduct which was over the subject site has been razed and the lots and immediately adjacent areas to the east and west are shown to be vacant.	There are no significant changes seen in the nearby areas to the south, east and west. The areas to the north are now vacant after the viaduct to the north has been razed.

3.4 City Directory Review

An abstract of various city directories was compiled by EDR Inc by scanning old directories. The scans are often unclear and present data that is open to interpretation. The entries from the EDR research were reviewed and the following found. A copy of the City Directory is attached in Appendix E.

The various addresses presumed to be within range of addresses for the Octavia Street block between Page Street and Lily Street and as determined on the Sanborn Maps were reviewed.

All of the even addresses from 200 Octavia Street to 228 Octavia Street were reviewed and most appeared to have been residentially occupied from the first listings in 1910 to the last identified listings in the 1950s.

It can be seen that the site has been mainly residential from at least 1910 through 1951 with no indications of commercial or industrial use. There was a 1910 listing of 204 Octavia Street as John Shipsey Liquors, and a Grocery store for 206 Octavia.

3.5 Other Sources

Environmental Reports

No other environmental site assessment related report were identified for the subject property.

San Francisco Fire Department (SFFD).

Because the site had large number of residential listings and addresses and was not developed since at least the 1960s, no review of the San Francisco Fire Department files was attempted.

San Francisco Department of Public Health

The Local Oversight Program (LOP) division of the Department of Public Health was contacted. The LOP maintains files relating to storage tanks, hazardous material spills and releases. In August, 2014 Mr. Russell Jin of the DPH indicated that there were no records of any of the addresses within the block or and identified as parcel S. He

further indicated that there were no environmental records in the DPH prior to the 1960s.

The (HMUPA) was contacted on August 20, 2014. The HMUPA maintains records regarding storage, use and generation of various hazardous materials primarily for commercial properties. Normal turn around time for HMUPA response can be up to eight weeks. If there are files, they will be reviewed when received, and if any data would affect the conclusions and recommendations of this Phase I, notification will be published immediately.

The review of the various city regulatory files did not reveal any Recognized Environmental Concerns.

4.0 SURROUNDING LAND USE

The property is in a mixed-use neighborhood in an area identified as the Western Addition or the Hayes Valley area. Historically much of the area immediately adjacent to the site was residential. There are and have been various commercial occupancies along the nearby Market Street. There were also small storefront businesses scattered through the Octavia Street area.

In general the area was residential until the 1960s when the Octavia Street right of way became part of the freeway system with an overhead viaduct often referred to as the Central Freeway. The Central Freeway right of way extended to the east and was formed in part by the subject parcel.

After the 1989 earthquake, the Central Freeway was razed and the Octavia Street right of way was restored and improved, although still providing access to the freeway system to the south.

The lot has remained undeveloped until the present and owned by the State of California.

The Hayes Valley area has continued to become more developed with many new residential structures along with various commercial (entertainment and retail) spaces.

5.0 SITE RECONNAISSANCE INSPECTIONS

5.1 General Site Description

The property was observed in order to identify any environmentally hazardous material or conditions. A detailed inspection for asbestos containing materials was not a part of this investigation. A reconnaissance of surrounding properties was made at the same time to determine the presence of underground storage tanks in proximity to the site, and other environmental concerns that may impact the subject site. Photographs of the site and surrounding areas are included in Appendix A as Figure 3.

On September 5, 2014, Mr. Mark Youngkin, the project geologist, conducted a field inspection of the property. At the time of the inspection the site was secured with chain link fences. Because the entire site was visible from public rights of way, Mr. Youngkin, continued the site observations.

Parcel S is a rectangular parcel 25.44 feet from east to west and 120 feet north to south. It is adjacent to the Lily Street right of way to the north, the Page Street right of way to the south and the Octavia Street right of way to the west. The three street frontages are all bordered by city maintained sidewalks. There are residential structures to the east.

The site is fenced to control access. It is vacant, fenced and partially paved and unpaved, and was used as a former community garden with raised soil beds and gravel walkways. There is a water valve cage which is locked, some mostly dead vegetation in raised beds, with a few small shrubs and trees that are still alive. There are also some empty wood compost bins, PVC piping, irrigation hoses, along with windblown trash, and plywood. There was no obvious dumped hazardous materials.

The limited community gardening normally does not utilize any chemical or non-organic growing methods.

The sidewalk along the street frontage of the address, as well as the visible exterior building walls and fences on the adjacent sites were observed. There was no evidence, such as fill caps, dispenser systems or signage, of the presence of any existing underground storage tanks (USTs) seen at or associated with the property.

As part of the site observations, Golden Gate Tank Removal (GGTR) company was contracted to carry out a Visual Property Inspection (VPI) including use of a magnetometer. GGTR published a report indicating that there was no indication of any underground storage tanks at the site. A copy of the VPI report is attached in Appendix B.

Refuse removal would normally be provided by city controlled contractors. Water and sewer services would be provided by municipal utilities. Energy (natural gas and electricity) are would also be provided by the PG&E company. No wells of any type, sumps, pits, lagoons or septic tanks were seen at the site.

There are no drainage facilities associated with the now vacant lot. Only minimal runoff onto the site may occur from the adjacent properties. The site is protected from street runoff by curbs and gutters.

5.2 Nearby Site Reconnaissance

The site is located in the Western Addition district which is an essentially a residential area with scattered service businesses. More locally, the site is in a gentrified area often referred to as Hayes Valley.

The most significant aspect of the area is the Octavia Boulevard/Street corridor. This is a right of way which has been developed after the removal of the overhead freeway viaduct. There are four traffic lanes with various medians and shoulders which have been landscaped with both vegetation and hardscape features.

Like the site itself, the properties directly to the south across Page Street and north of Lily Street are State owned parcels which are now undeveloped and used as a vacant lots/parking facilities/community garden areas.

The properties surrounding the site on all four sides are mainly occupied with multiple family residential structures. There is a commercial businesses is to the southwest at Page and Octavia Streets which is a restaurant and general merchandise store. To the west and northwest along the Oak Street frontages are relatively new retail/residential structures.

No active gasoline stations or other businesses which have active underground tanks or fuel distribution systems were seen in the nearby areas. However some of the nearby buildings have been involved in activities which may have used underground storage tanks in the past.

Some of the nearby businesses have in the past, currently or may in the future use, store and dispose of various materials, many of which are considered hazardous. However there was no evidence seen of any inappropriate or illegal activities involving such materials.

Figure 2 of Appendix A shows the nearby neighborhood and associated uses of the buildings in the area.

5.3 Suspected Asbestos Containing Material

As a vacant lot, there was no evidence of any Asbestos Containing Material (ACM) As previously stated, no detailed investigation for ACM was conducted. Asbestos inspections require the services of a "Certified Asbestos Consultant".

5.4 Electrical Transformers

No potential PCB-containing items were observed to exist on the subject property. This was verified by a PG&E representative.

5.5 Hazardous Material

There is no Hazardous Materials associated with the vacant lot.

5.6 Radon Gas

JCC did not perform sampling of suspect radon contamination. Radon is a naturally occurring radioactive gas. It is colorless and odorless. Because it is a gas, it is quite mobile. It can move through small spaces in soil and rock on which buildings are

constructed. Radon can seep into offices or homes through cracks, sumps, floor drains, joints or pores in hollow block walls. Radon can also be present in well water.

5.7 Lead Paint

There may be lead based paints on the adjacent buildings. Lead based paint is defined as any paint, varnish stain or other applied coating that have 1 mg/cm or 5 mg/kg (0.5%) more of lead by dry weight. Housing and Urban Development regulations define a lead-based paint hazard as any condition that causes exposure to contaminated dust, soil or paint that is present. Normally lead paint on walls which are in good condition is not a hazard. However during construction, some precautions may be necessary.

6.0 REGULATORY REVIEW

6.1 List of Databases Searched

The following databases were searched for sources of potential environmental liability at or in the vicinity of the subject site by EDR Inc. The databases and distances reviewed are those in accordance with ASTM standards. The Non-Standard Databases were reviewed to determine if any were of environmental concern. The EDR Executive summary and entries within 500 feet are presented. in Appendix F. The balance of the full report, more than 800 pages has been archived and is available upon request.

6.2 Database Site Inventory

The EDR review of the required ASTM databases and additional databases and records yielded the following locations within 500 feet of the site or others which are significant because of their profile, locations and significance. The locations are summarized along with the distance from the site, the assumed groundwater gradient and the databases the location was found on.

Sites which are considered significant are highlighted and discussed individually in a separate section.

DATABASES SITE INVENTORY PARCEL S San Francisco, California

6.3 Significant Addresses

The site itself nor any addresses within the range of addresses for the Octavia Street frontage were not shown on any of the databases.

There are other sites, listed near the site, but based on the gradient position, the nature of the databases and general site profiles of the entries, there are no conditions related to those other sites on the database review that are considered to be Recognized Environmental Concerns.

7.0 SUMMARY OF FINDINGS

7.1 History

The site was residentially developed by 1886 and remained so until about the mid 1950s or 1960s when it became part of a State owned right of way and had a reinforced concrete freeway viaduct constructed over it. The viaduct remained until the freeway system in the area was razed in the late 1990 and early 2000s.

At that time the site became vacant and fronted along the new improvements of the Octavia Boulevard right of way.

It has remained unimproved and may have been used as parking, landscaping, community gardening or left fallow.

There was no physical or documentary evidence found during this investigation of any spills, leaks or inappropriate use storage, generation or disposal of chemicals, hazardous materials, reportable substances or hazardous waste.

7.2 Physical Conditions of the Property

The property is a 3,053 square foot rectangular lot which is vacant and unused. It fronts along Octavia Street with narrow frontages along Lily Street to the north and Page Street to the south. It is fenced and there is no public access to the site. There is some debris and remnants of a community garden at the site. There was no indications of any use of any hazardous materials at the site.

No evidence such as signage, fill caps, or vent pipes which would indicate the presence of any USTs was seen.

There are no drainage facilities currently at the site. There is only minimal drainage from any adjacent properties. The site is protected from street runoff by curbs and gutters.

There are no physical or documentary conditions of the property itself which are Recognized Environmental Concerns.

7.3 Environmental Situation

There are no records of Environmental Liens against the property. The NPL Recovery Database (US EPA), EPA Liens Database, the DTSC Liens Database and the DTSC Deed Database were reviewed to determine the presence of any environmental associated liens. None were found. During the interview and on the questionnaire, the current owner indicated that there were no environmental liens associated with the property.

There were no Federal or State environmental "activity or use limitation" (AULs) in place for this property. The negative AUL statement is based on the review of more than 100 databases particularly the U.S. EPA's Engineering Controls and the Institutional Controls and the California ENVIROSTOR.

There are minor data gaps regarding the use of the property from its original undeveloped state. However none are considered to be significant and are not likely to alter any conclusions or recommendations of this report.

7.4 Current Conditions of the Nearby Area

The site is located within a mixed-use urban area in San Francisco. The adjacent and surrounding areas are all a mix of various residential uses with scattered retail and civic uses. There are some nearby businesses which may have or may in the future use, store, generate and dispose of materials that may be hazardous, but these materials are common in typical modern urban commercial settings. Some of the nearby sites have had leaking underground storage tanks which have leaked. These sites have been monitored by the San Francisco Department of Public Health and all those within 1/8th of a mile have been closed.

There could be other businesses in the nearby area which have, presently do and will in the future use, store and dispose of various materials which may be hazardous. However there were no indications that any business inappropriately used, generated, stored or disposed of any hazardous materials. Any impact from such sources are the responsibility of the generating facility.

There was no visual evidence of registered or unregistered USTs seen in the nearby area during the site reconnaissance. However some of the properties may have unregistered and unknown tanks. There are no gasoline services stations or fuel distribution systems seen in the nearby areas.

There were no Recognized Environmental Concerns seen in the nearby area.

7.5 Regulatory Databases and Review

The site itself is not on any of the more than 100 databases reviewed.

There are other sites, listed near the site, but based on the gradient position, the nature of the databases and general site profiles of the entries, there are no conditions related to

those other sites on the database review that are considered to be Recognized Environmental Concerns.

8.0 CONCLUSIONS & DISCUSSION

The site was initially developed as a residential property in the 1880s and remained so until the 1950s or 1960. It was cleared of all structures and became a State owned parcel which was part of the state freeway system.

The freeway system was razed, became vacant in the late 1990s and has remained vacant to the present with no registered or documented uses.

There is no physical or documentary evidence of any use, storage or disposal of any chemicals, hazardous materials, reportable substances or hazardous waste at the site.

The site may be subject to the requirement of the Maher Ordinance. The Ordinance was originated to address situations of artificial fill and historic industrial and commercial activities which may have involved hazardous materials. The Ordinance may be applied to sites where there is a change of use.

The site is located within an mixed-use area of San Francisco. There have been, are and may be various businesses, such as automotive repair facilities, commercial activities and contractors in such an area which may be environmental concerns to the site as well as to any property in the nearby area. Many such businesses may use, store, generate and dispose of hazardous materials. No Recognized Environmental Concerns were identified in the nearby areas.

This Phase I Environmental Site Assessment report is compliant with ASTM Designation E1527-05, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process"; U.S. EPA's "Standards and Practices For all Appropriate Inquiries" (40 CFR Part 321); and the Federal Small Business Liability Relief and Brownfields Revitalization Act (January 11, 2002). JCC declares that all-appropriate inquiries in conformance with the standards and practices have been developed and performed during the preparation of this report.

Based on all appropriate inquiries carried out during the preparation of this report, it is our opinion that there are no Recognized Environmental Concerns associated with this property.

9.0 RECOMMENDATIONS

There is no evidence that any additional environmental investigation at this site is warranted at this time.

10.0 LIMITATIONS

The observation and conclusions presented in this report are professional opinions based on the scope of activities and information obtained through the Phase I Environmental Site Assessment described above.

JCC has performed this assessment in a professional manner using that degree of skill and care exercised for similar conditions by reputable and competent environmental consultants. Nonetheless, there are several major qualifications that are inherent in the conduct of this, or any other environmental due diligence examination.

- It is difficult to predict which if any of the identified potential problems will become actual problems in the future. Federal and State regulations continually change, as do the enforcement priorities of the applicable government agencies.
- The distinct possibility always exists that major sources of future environmental liability have yet to manifest themselves to the point where they are reasonably identifiable through an external investigation.
- The results of this investigation represent the application of a variety of engineering, technical and professional disciplines to materials, facts and conditions associated with the subject property. Many of these facts and conditions are subject to change with time. Accordingly, the conclusions and recommendations of this report must be considered in this context.
- JCC shall not be responsible for conditions, facts or the consequences arising from any relevant data that were concealed, withheld or not fully disclosed at the time of the preparation of this report.

Opinions presented herein apply to site conditions existing at the time of our study, and cannot apply to site conditions or changes of which we are not aware or have not had the opportunity to evaluate. It must be recognized that any conclusion drawn from these data rely on the integrity of the information available at the time of the investigation, and that a full and complete determination of environmental risks cannot be made. Sampling and analysis at the site would be required to document whether hazardous chemicals are present in soil and/or groundwater.

1999- Present JOHN CARVER CONSULTING Oakland , California. An environmental firm which serves the needs of engineers, contractors and developers throughout the area. Performs Phase I and IIs, Soil and Groundwater Investigations. Soil Profiling and Characterization while coordinating complex projects with both State and Local Agencies.

1995 - 1999 GOLDEN GATE TANK REMOVAL San Francisco, California. Chief engineer for an environmental contractor specializing in UST removal and remediation.

1993-1994 BAY AREA TANK REMOVAL, INC. San Francisco, California. Engineer in charge of tank removal remediations, including source removal, soil disposal, and work plans. Also provided shoring plans, geotechnical services during drilling and exploration projects.

1991-1993 L&W ENVIRONMENTAL SERVICES INC. San Francisco, California. Project manger and engineer in charge for a variety of environmental projects within the Bay Area. Projects included tank removal, Phase I Environmental Assessments, Work Plans, Soil Venting Projects, and Landfills

1988-1990 ENGINEERING CONSULTANT San Francisco, California Consulting in the geotechnical, environmental and contracting professions.

1981-1988 JOHN CARVER DRILLING INC., Owner and President San Francisco, California. Started and managed a geotechnical exploration company which quickly expanded into environmental and construction services. The drilling company grew to two drill rigs and eight employees while serving over 80 clients in the geotechnical, water well, environmental and construction industries. While president of the company, I became licensed as a C61 and C57 Contractor to better serve my clients. Throughout the growth of the company, I remained active in soil engineering and became a registered Geotechnical Engineer in 1987. As environmental concerns increased, I gained experience in contamination studies, site evaluations, and

monitoring well installations. These projects required access to all types of sites, drilling and sampling of a variety of subsurface conditions, and working with various levels and concentrations of contaminants.

1979-1981 CONSULTING CIVIL ENGINEER San Francisco, California Provided geotechnical consulting services to the general public and engineering companies throughout California. Performed site evaluations and remediation for projects in the San Francisco area. As a consultant to the engineering community, I was involved in local dam studies, BUREC Dam Safety reviews and evaluations, special inspections for hospitals, construction inspections, and general engineering such as report writing, proposal preparation, and obtaining utility clearances.

1978-1979 HARDING LAWSON ASSOCIATES, Chief Engineer Santa Ana, California Assisted in opening a new office in Southern California and maintaining an 11 person office. Responsible for administration, billings, personnel, expenditures, and production. Acted as project manager, report reviewer, laboratory director, and office manager. Other primary responsibility was business development throughout Southern California for both local and nationwide markets.

1977-1978 BECHTEL CORPORATION, Research Engineer San Francisco, California Was principal researcher on an EPRI project, "Improvement of Installation of Underground Electrical Transmission Lines." Prepared a proposal and was in charge of a DOE workshop on the same subject. Involved in staffing, cost tracking, and reporting for both projects. Other projects involved underground storage, mining, tunneling and material handling.

1972-1977 R. C. HARLAN & ASSOCIATES, Vice President San Francisco, California Began as a field engineer and progressed to Vice President and Principal. Worked on all aspects of soil engineering. Responsible for exploration, testing, reporting, project management, billing, and client relations. Carried out structural and hydraulic design of reinforced concrete dam spillways, assisted in quantity take-offs for various dams, carried out dam siting studies, and assisted in hydrologic calculations. Spent three months as resident engineer on a dam raising project. In charge of branch office for one year. Other major projects included investigations and field observation programs for infiltration ponds, levees, landfill slope leachate problems, and residential developments.

1971 MILTON M. GREENBAUM ASSOCIATES, Engineer Louisville, Kentucky Performed all tasks required in a small soil and general civil engineering consulting firm. Laboratory: Concrete, asphalt, and soil tests; performed tests, summarized and published results. Field: Asphalt plant inspection; site reconnaissance for planning soil explorations. Office: Set up testing programs, reviewed test results, carried out soil engineering for minor projects, and wrote reports. Performed drainage studies, residential planning, and surveying for various projects.

1971 MILLER WHIRY BROOKS, Civil Engineer Louisville, Kentucky Performed various design tasks for development of residential and commercial projects. Was responsible for planning and drafting of residential drainage, streets, and utility plans. Laid out street and highway alignments as well as parking and drainage facilities for a regional shopping center.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1910 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.
